## Figures

#### Simple 4.1

Figure 1: Logo de l'ULB

```
\begin{figure}[h]
        \centering{\includegraphics[scale=0.5]{~/templates/latex/images/ulbLogo.png}}
        \caption{Logo de l'ULB}
        \label{fig:ulbLogo}
\end{figure}
```

#### 4.2 Côte à côte

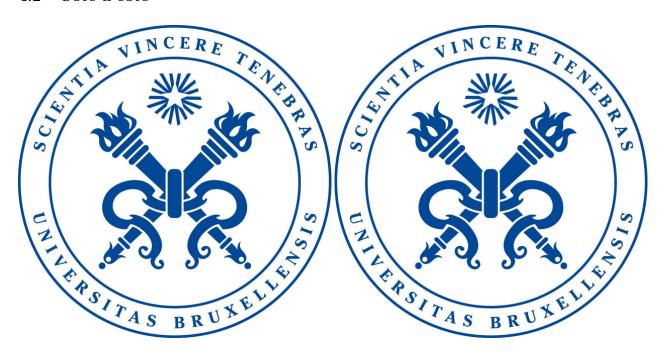

Figure 2: Logo de l'ULB

Figure 3: Logo de l'ULB

```
\begin{figure}[h]
   \begin{minipage}[t]{0.50\textwidth}
\centering
\includegraphics[width=\textwidth]{~/templates/latex/images/ulbLogo.png}
\caption{Logo de l'ULB}
\label{fig:model1}
   \end{minipage}
   \begin{minipage}[t]{0.50\textwidth}
\centering
\includegraphics[width=\textwidth]{~/templates/latex/images/ulbLogo.png}
\caption{Logo de l'ULB}
\label{fig:model2}
   \end{minipage}
\end{figure}
```

#### 5 Références

Comment référencer une figure : ??

Comment référencer une figure : \ref{fig:ulbLogo}

#### 6 Code

```
6.1 Code C++
#include <iostream>
using namespace std;
int main() {
        cout << "Hello, World!";</pre>
        return 0;
}
\begin{minted}{cpp}
#include <iostream>
using namespace std;
int main() {
cout << "Hello, World!";</pre>
return 0;
\end{minted}
6.2 Code Python
def main():
        print("Hello, World!")
if __name__ == "__main__":
   main()
\begin{minted}{python}
def main():
print("Hello, World!")
if __name__ == "__main__":
main()
\end{minted}
6.3 Code Java
public class HelloWorld {
```

#### 6.4 Code Bash

```
#!/bin/bash
echo "Hello, World!"
```

```
\begin{minted}{bash}
#!/bin/bash
echo "Hello, World!"
\end{minted}
```

#### 6.5 Code Matlab

```
D = 20;gamma = ones(1,nn+1)/D;
y1 = 100.*ones(1,10);y2 = 75.*ones(1,10);y3 = 50.*ones(1,10);y4 = 25.*ones(1,10);y5 = 0.*ones(1,10);
gamma(1:50) = [y1 y2 y3 y4 y5].*gamma(1:50);

\begin{minted} {matlab}
D = 20;gamma = ones(1,nn+1)/D;
y1 = 100.*ones(1,10);y2 = 75.*ones(1,10);y3 = 50.*ones(1,10);y4 = 25.*ones(1,10);y5 = 0.*ones(1,10);
gamma(1:50) = [y1 y2 y3 y4 y5].*gamma(1:50);
\end{minted}
```
